SLIDING GLASS PANELS

Seeglass-lux is a sliding glass panel system designed to separate interior spaces. This solution, specially created to optimise the passage of natural light and energy efficiency. It is ideal both for homes and for offices, restaurants, hotels, etc..

Thanks to the lateral sliding movement of the glass panels, special configurations are generated that allow the movable partitions to be hidden inside walls or in specific architectural sections (recesses, walkways, etc.)

The new **industrial style decoration** option, , which we have introduced as a distinctive new product at **Seeglass-lux**, has a digital thermal printing incorporated in the glass itself, which gives it a modern and differentiating effect.

Its minimalist, matt black design combines perfectly with the various system drives and accessories, and creates a chromatic harmony in the room that everyone who sees it will fall in love with.

## SYSTEM ADVANTAGES

Suitable for indoor use.

Easy installation, handling and cleaning.

Optimisation of natural daylight.

Stylish and trendy design.

Minimal component wear.

Top-quality product.

Range of applications (HORECA, establishments and housing).

Utilising available spaces.

Adaptable to any space, protecting its structures and elements.

Energy efficiency and sustainability.

MULTIPLE CONFIGURATIONS

Due to the large number of possible configurations, central connections can be created to link several systems.
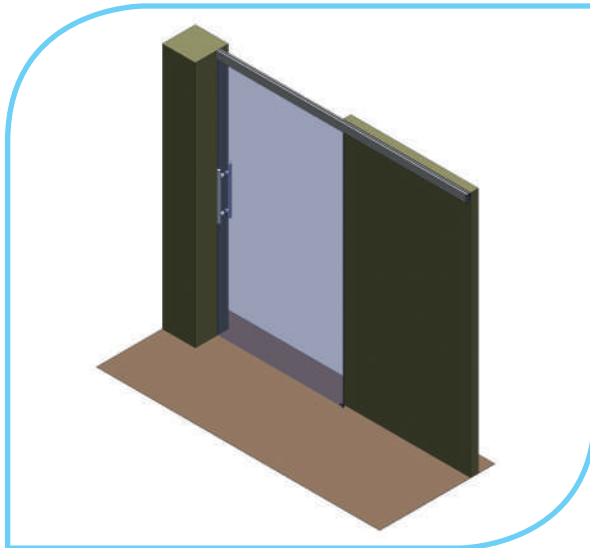

Especially recommended to cover large widths or to achieve commercial style doors.

It is a simple frame connection, which allows several sections to be joined together to make the most of large spaces.
